Kieron Dowie

Developer • Designer • Programmer

Skills

HTML5 – I am able to use HTML, JS and CSS to develop a fully responsive website from start to finish, as well as for more complex applications involving advanced scripting or styling.

MySQL – I have extensive experience using MySQL, among other querying languages, to manage small-scale databases in PHP and other applications.

PHP – I regularly develop websites from the ground up using PHP, as well as maintain and debug existing PHP websites, both with plain PHP and with various frameworks.

Jquery – I am able to use Jquery to create interactive and dynamic webpages, including animations, colorization and other dynamic css.

NodeJS – I have used NodeJS on projects of every scale, more commonly as a serverside language for serving of pages, but also combined with socket.io as a real time solution for various applications.

Wordpress – I have some experience creating themes and websites using Wordpress as a framework, though I have more experience using plain PHP.

Python – I regularly use python on the desktop for various automation and image manipulation purposes.

Recent Work

Clark Tutoring

Responsive website designed and developed from start to finish for a client over the course of a week, while communicating with the client.
https://clarktutoring.com

Lightspeed

Over my time working for them, I have performed bug fixes, feature additions and worked on designing and developing new pages to be added, as well as maintaining these features over time.

http://lightspeed.co.za/

Cybersmart

Carried out changes to pages, following briefs from the client, as well as fixed bugs, and refactored existing code.
